CorelDraw

This guide will walk you through PDF creation from CorelDraw 11 . The process is identical on both Mac and Windows platforms, so only one set of instructions is provided. Note that these steps work for CorelDraw 10 as well.

1. With your file open select File > Publish to PDF
2. In the PDF Style list box choose PDF for Prepress (Note: If you need to change specific settings, select Settings and do so. In general, the default settings are ok). Click the Save button.

Save As PDF

Save in:	Sample Pictures

File name:	Graphic1.pdf	Save
Save as type:	PDF Files (*.pdf)	Cancel
PDF Style:	PDF for Prepress	Settings...
